

# Urgent Public Notice About Tesla Motors

**What the world thinks about Tesla Owners:** For the, relatively, small number of cars produced, Tesla has had the largest number of crashes by drunk drivers, sexual harassment charges against those owners, and tax evasion investigations against those owners. Tesla owners have, by far, been involved in the most divorce filings, by volume, in which “abuse of spouse” is the key issue than any other car company. This means that in addition to the “*douchebag*” perception that driving a Tesla carries with it, scientific and demographic evidence now proves that Tesla owners have a lower moral character. Be certain that you want the world to see you inside of a Tesla. This chart shows the sociological facts behind the poor ethics that driving a Tesla reflects on it’s owners:

**How “Green” is a Tesla?:** Tesla investors own lithium mines in Afghanistan, Boliva and other countries that they acquired by promoting wars in those regions so they could profiteer on Tesla’s lithium ion batteries. Lithium does not come from America. If you think that oil is bad because it promotes war, you should see how many people have been killed in order to profiteer on corrupt lithium mining wars. Tesla isn’t “Green”. Tesla uses toxic, self-igniting, explosive, cancer-causing, fetus-mutating lithium batteries that contain a massive soup of deadly chemicals inside them. The chemistry gets more explosive over time and poisons the Earth when the batteries are used up. 40% of the workers who make the batteries die from getting poisoned by making the batteries. Panasonic, who promotes the batteries, has had over 40 international corruption, bribery and dumping charges filed against them over these batteries. Lithium batteries just blow up whenever they want to.

**You are promoting organized Crime by owning a Tesla:** Elon Musk took Tesla away from its founders in a hostile takeover. He and his Silicon Valley Cartel did this to exploit their corrupt lithium mining scam. His Cartel placed their own people in the Department of Energy in order to get them to give Tesla exclusive taxpayer cash because, as Elon Musk said on 60 Minutes, he was just about to go bankrupt because nobody wanted to buy the cars. Tesla has used bribes, illegal campaign financing, illegal stock and asset exchanges with Senators and stock market manipulation enhanced by Tesla co-owner, the privacy abusing company: Google.
